Azion Style guide

The MailChimp Pattern Library is a byproduct of our move to a responsive, nimble, and intuitive app. Constant iteration requires both an efficient workflow and a well defined collection of atomic elements that can assemble new UIs quickly without accruing new technical or design debt.

We’re also solving an internal communication problem by documenting and assembling a reference site of our patterns. A common lexicon of code and UI elements benefits us in a few ways:

We can build consistently and focus on workflows and logic, not web forms and list items:

- We can reuse code instead of roping in a developer
- We can maintain our code by seeing our patterns in one place, define elements in our application, and keep redundancy to a minimum

We guard our pattern library jealously, and add new patterns only when the case for doing so is sound. New patterns come at a high cost—they require new design elements, additional code, maintenance, and they increase the cognitive load on users.

Our pattern library is both a learning tool and a compass that corrects our course as we build new things. We share our work here to help others on a similar path.

It Ain’t Bootstrap

Just to be clear, the MailChimp Pattern Library isn’t meant to be a UI framework like Bootstrap—it’s not a definitive guide on how a web application should be built. It’s tailored specifically to our needs, so if you attempt to use it as a foundation for a future project your mileage may vary. Many of the ideas in our library are a greatest hits collection of ideas others have pioneered that we’ve adapted to a new situation. Modify and mangle at will, but know this is not a supported system—it’s a learning library.

Want to hear the story behind our Pattern Library? Subscribe to our bi-weekly newsletter, where the MailChimp UX team discusses process, techniques, and insight that we learn from working on an application that serves more than 3 million people.

Code snippet

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Donec diam lacus, rutrum at purus quis, faucibus rhoncus ligula. Duis a varius mi. Duis molestie enim eu accumsan congue. Suspendisse imperdiet, arcu sed tempor consequat, mi tortor elementum lectus.

Grids

Our grid system is composed of 12 flexible columns with a gutter between columns of 40px. We apply border-box so that the border and padding is included in the width of the grid columns.

Typography

Our official typography family is Adobe Myriad Pro released in 1992. Myriad has become popular for both text and display composition. Designed by Robert Slimbach & Carol Twombly with Fred Brady & Christopher Slye, Myriad has a warmth and readability that result from the humanistic treatment of letter proportions and design detail. Myriad Pro's clean open shapes, precise letter fit, and extensive kerning pairs make this unified family of roman and italic an excellent choice for text typography that is comfortable to read, while the wide variety of weights and widths in the family provide a
